

# AJAY KUMAR

Gwalior, Madhya Pradesh — +91-9981105993 — [ajayvirendrasingh007@gmail.com](mailto:ajayvirendrasingh007@gmail.com)  
[linkedin.com/in/ajay-kumar](https://linkedin.com/in/ajay-kumar) — GitHub — [ajaykumar-91.github.io/portfolio/](https://ajaykumar-91.github.io/portfolio/)

## PROFESSIONAL SUMMARY

Experienced IT professional with 5+ years of total experience, including 3.5+ years specializing in Java Development and L2 Production/Application Support, currently transitioning into DevOps. Strong background in the complete software development life cycle (SDLC), application monitoring, incident management, API debugging, and cloud deployments. Proven expertise in troubleshooting production issues, writing database queries, and utilizing DevOps practices such as Linux administration, shell scripting, Docker, Git/GitHub, Jenkins, and GitHub Actions to optimize support workflows, achieving up to 99.9% system uptime and significantly minimizing application downtime.

## TECHNICAL SKILLS

- **Cloud & DevOps:** AWS (EC2, EKS, IAM, VPC, CloudWatch), Docker, Kubernetes, Terraform
- **CI/CD & Build Tools:** GitHub Actions, Jenkins Pipelines, GitHub Webhooks, AWS CodeBuild, CodePipeline, Maven
- **Programming & Frameworks:** Java 8, Core Java (OOps, Exceptions, Multithreading), J2EE, Spring Boot, Hibernate, RESTful APIs, Microservices, Struts
- **Databases & Utilities:** MySQL, PostgreSQL, Tiberio DB, Oracle SQL, phpMyAdmin
- **Monitoring & Logging:** Prometheus, Grafana, Kibana (ELK), CA APM Web View, CloudWatch, Log4j
- **ITSM & Version Control:** Git, GitHub, JIRA, CA-SDM, Talisma

## PROFESSIONAL EXPERIENCE

### Independent / Freelance DevOps & Support Engineer

Jan 2024 – Present

*Self-Employed / Open-Source Contributor*

Gwalior, India

- Architected and deployed end-to-end CI/CD pipelines utilizing GitHub Actions, Jenkins, and AWS CodePipeline, reducing manual deployment time by 40%.
- Containerized microservices applications by designing optimized multi-stage Dockerfiles, improving resource efficiency by 25%.
- Provisioned scalable cloud infrastructure on AWS using Terraform to support application workloads of up to 10,000 active users.
- Established real-time infrastructure monitoring dashboards using Prometheus and Grafana, ensuring rapid anomaly detection within 2 minutes.
- Delivered technical consultation for Java/Spring Boot configurations and addressed 50+ Linux server administration tasks.

### Corporate Infotech Pvt. Ltd. (CIPL)

Sep 2023 – Jan 2024

*Software Developer (Eforms Domain – Project NIC)*

New Delhi, India

- Developed and maintained high-performance RESTful APIs using Java 8 and Spring Boot, successfully handling 100,000+ daily requests.
- Integrated complex business logic within APIs using the Struts framework, accelerating JSON data processing speed by 15%.
- Executed basic DevOps practices including Docker containerization and Jenkins automation to streamline build cycles by 30%.
- Performed rigorous API testing and request validation using Postman, decreasing post-release defects by 20%.
- Directed database schema operations on MySQL and led technical troubleshooting efforts with phpMyAdmin, saving 10 hours of manual work weekly.
- Coordinated source code pull requests using Git/GitHub, settling 100+ tracked tickets through Open Project.

### Tata Technologies Limited

Nov 2022 – Sep 2023

*Java Developer / Production Support Engineer (MyKia Domain – Project Kia India)*

Gurgaon, India

- Delivered L2 production support and technical troubleshooting, maintaining 99.9% application availability for enterprise users.
- Analyzed production environments and applied resolution methodologies to rectify over 200 critical incidents.
- Formulated complex queries using Tiberio DB to perform crucial data fetching, reducing issue investigation time by 25%.

- Leveraged Git Extensions to execute version control operations, successfully synchronizing 50+ active branches.
- Validated API endpoints using Postman to discover bugs and ensure 100% functional alignment with business needs.
- Applied basic Linux commands for daily log tracking and infrastructure health inspections, minimizing downtime risks.

#### **Value Point Systems Pvt. Ltd.**

Oct 2017 – Nov 2022

*Software Engineer (Project Goods and Service Tax | Ministry of Corporate Affairs)*

Gurgaon, India

- Provided end-to-end L2 application support and production monitoring for official GST portal microservices, serving millions of users.
- Oversaw complete incident life cycles, successfully closing 500+ service and problem tickets using Talisma.
- Monitored production logs and alerts using ELK Stack (Kibana) and CA APM, proactively mitigating performance bottlenecks.
- Carried out regular sanity testing on production URLs (including SLA 7/8 URLs) and settled critical GST DRC03 tickets within strict SLAs.
- Administered code bases and tracked Standard Operating Procedures (SOPs) securely via SVN repositories.
- Utilized basic Linux administration and MySQL queries to perform rapid log analysis and investigate 20+ daily system alerts.
- Analyzed 1000+ verified production trouble tickets, assigning severity classifications to enforce 100% SLA adherence.
- Investigated and rectified backend system defects utilizing basic SQL, Oracle commands, and SSCD tool applications.
- Collaborated with external corporate organizations to reproduce and troubleshoot application problems, cutting resolution time by 30%.
- Fetched critical system data based on tailored MySQL queries to support daily operational requirements with 100% accuracy.

## **DEVOPS PROJECTS**

---

### **React Application CI/CD Automation**

[GitHub Repository]

- Containerized a frontend React application by composing an optimized, multi-stage Dockerfile to minimize image sizes by 50%.
- Built and automated a complete Jenkins and GitHub Actions CI/CD pipeline integrated with a Docker Compose local testing infrastructure.
- Configured Prometheus and Grafana metrics exporters to establish real-time application performance monitoring dashboards for 24/7 uptime.

### **TrendStore DevOps Deployment on AWS EKS**

[GitHub Repository]

- Provisioned reliable, cloud-agnostic target infrastructure using Infrastructure as Code (IaC) principles with Terraform.
- Configured and deployed highly scalable AWS EKS clusters alongside Kubernetes manifests, deploying in under 5 minutes.
- Enabled continuous deployment (CD) workflows by automating triggers through Jenkins pipelines and GitHub Webhooks.

### **MindTrack DevOps Project**

[GitHub Repository]

- Engineered robust automation workflows and continuous delivery pipelines using AWS CodeBuild to manage application builds and Deploy to EKS via CodePipeline .
- Streamlined containerized microservices delivery and multi-environment tracking to ensure zero-downtime deployment setups.
- Set up automated notifications, log monitoring, and validation steps to strictly enforce high code quality standards and use CloudWatch Logs to track build, deploy, and application logs.

## **EDUCATION**

---

### **Bachelor of Engineering (B.E.) in Electronics Engineering**

2014

Institute of Engineering, Jiwaji University, Gwalior, Madhya Pradesh, India
